

# Backend Developer

Delhi NCR, Gurgaon, Noida | 2–5 Years

## About the Role

We're looking for a passionate Laravel Backend Developer to join our engineering team and help build one of the fastest-growing AI-powered platforms.

You'll work on a large-scale, feature-rich SaaS platform used by lacs of users, where scalability, performance, security, and clean architecture are critical.

You'll be involved in the complete software development lifecycle—from designing scalable backend architecture and developing REST APIs to building intuitive user interfaces using React, Blade, and Livewire. You'll also collaborate with our AI team to integrate Python-based AI services and modern LLM technologies into the platform.

We're looking for someone who has experience building complex business applications such as LMS, CRM, ERP, HRMS, or other enterprise SaaS products, and who is comfortable working in a fast-paced product environment where requirements evolve frequently. The ideal candidate is adaptable, takes ownership, communicates effectively, and enjoys solving challenging technical problems while continuously learning new technologies.

If you're passionate about building high-quality software, writing clean and maintainable code, and contributing to an innovative AI-driven product, we'd love to hear from you.

## What You'll Do

- Design, develop, and maintain new features across our platform.
- Develop scalable REST APIs using Laravel.
- Maintain and enhance Laravel Blade and Livewire components where applicable.
- Design efficient MySQL database schemas and optimize complex queries.
- Integrate third-party APIs such as payment gateways, email/SMS services, authentication providers, and AI services.
- Develop secure authentication and role-based authorization.
- Build queue-based background processing using Laravel Queues and Horizon.
- Implement caching strategies using Redis.
- Optimize application performance and troubleshoot production issues.
- Collaborate with designers, QA engineers, and product managers.
- Participate in architecture discussions and code reviews.
- Integrate Python-based AI services into Laravel applications through APIs.
- Write clean, reusable, and maintainable code following Laravel best practices.

- Build responsive user interfaces using React, Bootstrap, HTML, CSS, and JavaScript.

## **Must Have**

### **Technical Skills**

- 2–4 years of hands-on experience in PHP and Laravel development.
- Expert-level knowledge of Laravel Framework (Laravel 8/9/10/11 preferred).
- Strong understanding of Object-Oriented Programming (OOP), SOLID principles, and design patterns.
- Extensive experience developing and maintaining large-scale web applications such as Learning Management Systems (LMS), CRM, ERP, HRMS, or other enterprise SaaS platforms.
- Strong experience in building secure and scalable REST APIs.
- Hands-on experience with Laravel Livewire.
- Strong knowledge of React.js, JavaScript (ES6+), Bootstrap, HTML5, CSS3, and Blade Templates.
- Excellent understanding of MySQL, database design, indexing, and query optimization.
- Experience with Redis, Laravel Queues, Horizon, Events, Jobs, Notifications, and Scheduler.
- Hands-on experience with Git, GitHub/GitLab, and collaborative Git workflows (feature branches, pull requests, code reviews, merge conflict resolution).
- Experience with CI/CD pipelines and automated deployment processes.
- Experience integrating third-party APIs and external services.
- Familiarity with Docker and Linux-based development environments.
- Strong debugging, performance optimization, and troubleshooting skills.

## **Nice to Have**

- Python (FastAPI or Flask)
- AI/LLM integration (OpenAI, Claude, Gemini)
- AI Agent development
- Vue.js
- TypeScript
- Elasticsearch/OpenSearch
- Vector Databases (Qdrant, Pinecone, pgvector)
- RAG (Retrieval-Augmented Generation)
- Azure or AWS Cloud
- Unit Testing (Pest/PHPUnit)
- Experience with multi-tenant SaaS architecture

## **What We're Looking For (Beyond the Checklist)**

We're looking for someone who:

- Has experience working on large, feature-rich products such as LMS, CRM, ERP, HRMS, or similar enterprise applications.
- Can quickly understand complex business requirements and translate them into scalable technical solutions.
- Thrives in a fast-paced environment where product requirements evolve frequently and can adapt quickly to changing priorities.
- Takes ownership of features from planning through deployment and post-release support.
- Writes clean, maintainable, and well-documented code following Laravel best practices.
- Proactively identifies performance, security, and scalability improvements instead of only implementing assigned tasks.
- Communicates effectively with product managers, designers, QA engineers, and fellow developers.
- Has a strong learning mindset and enjoys working with modern technologies, including AI-powered applications.
- Values code quality, testing, collaboration, and continuous improvement.
- Can work independently while also contributing effectively as part of a team.
